Troubleshooting Guide

This service hints is published for technicians and engineers for repair. And it gives you the information how to judge the defective board of PDP. In the future, we will improve the contents for more easy diagnostic and trouble shooting.

Please file and use this Service Hints together with the main service manual and other publications related to models.

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

5. Troubleshooting

We know the possible defective board by picture trouble area.

<Display device block diagram>

<Relation of defective board and picture trouble area >

* In case of V10/V11 series, A board change to D board.

5.Troubleshooting for picture trouble

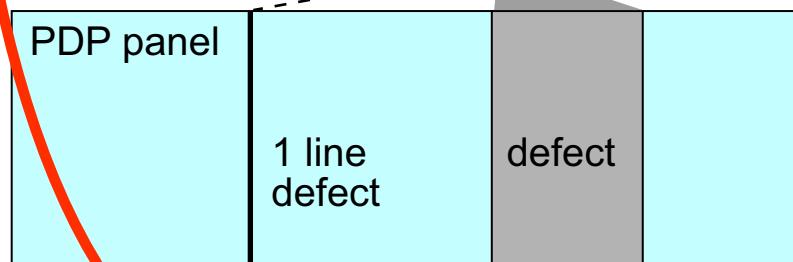

Picture trouble (diagnosis of vertical line)

PDP panel defective (Data driver IC defective)

Width is narrower than FPC

Data driver IC defect= PDP panel defect

1 line defect

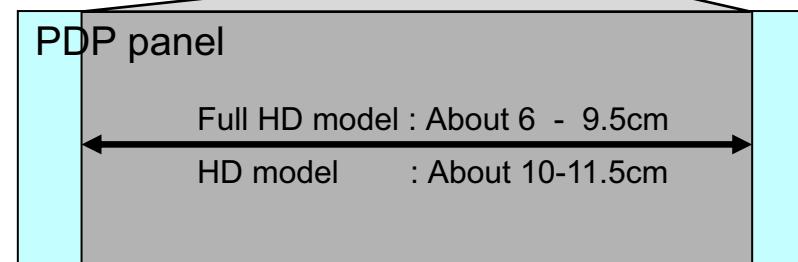

Data driver IC

C board

Buffer IC

Data driver IC or C or A board defective

Width is same as FPC

PDP panel

Full HD model : About 6 - 9.5cm

HD model : About 10-11.5cm

Data driver IC

C board

Buffer IC

A board

or

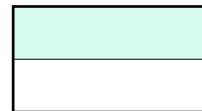

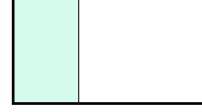

or

* In case of V10/V11 series, A board change to D board.

5.Troubleshooting for picture trouble

Summary of picture trouble

< Some part of screen >

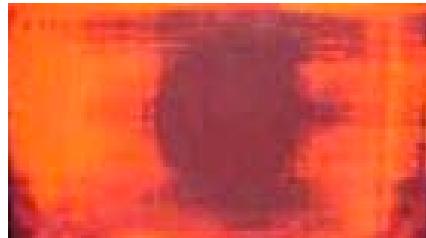

Symptom	Actual symptom	Defective board
Trouble at Upper or Lower half	 	SU / SD board
Horizontal line (Upper or Lower side)	 	SU / SD board or PDP panel
Trouble at Left or Center or Right part (42 inch : Left or Right half)	 	C1-C3 board (42 inch : C1,C2)
Vertical line (Width is same as FPC)	 	C or A board or PDP panel <small>* In case of V10/V11 series, A board change to D board.</small>
Vertical line (Width is narrower than FPC)	 	PDP panel
Regular bar (*1)	 	A board <small>* In case of V10/V11 series, defective board is A board or D board.</small>

(*1) In case of V10/V11 series, we can judge A-board or D-board is failure by using Test Pattern.
Please refer to Page 24, 25.

5.Troubleshooting for picture trouble

Summary of picture trouble

< All area of screen >

Symptom	Actual symptom	Defective board
Irregular Color (*1)	 	A board * In case of V10/V11 series , defective board is A board or D board.
All vertical line (*1)	 	A board * In case of V10/V11 series , defective board is A board or D board.
Abnormal electric discharge	  	SC / SS board

(*1) In case of V10/V11 series, we can judge A-board or D-board is failure by using Test Pattern.
Please refer to Page 24, 25.

<Purpose>

Test pattern is helpful to find the defective parts.

For example, if we can see the picture problem at all over the screen (Picture Noise, Full Vertical Line, Abnormal color), we can find signal processing problem or panel phosphor problem by using test pattern.

<Model>

PDP 2009 Models
(V10,V11,G10,G11,S10,X10,C10 series)

<Symptom>

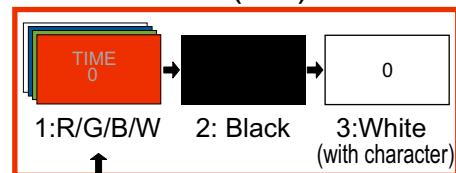

Picture Noise, Full Vertical Line,
Abnormal color

<How to enter the Test Pattern>

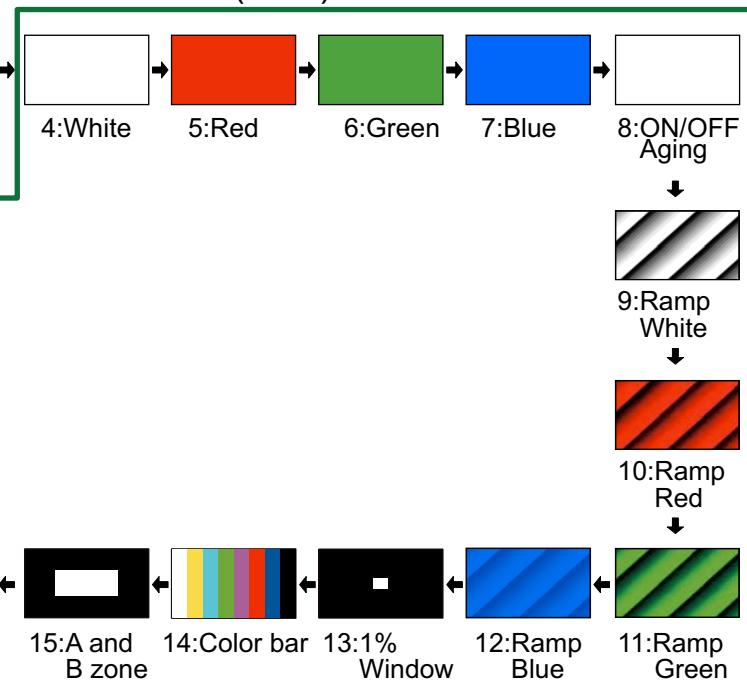

1. While pressing “**VOLUME (-)**” button of the main unit, press “**0**” button of the remote control three times within 2 seconds.
2. Push button “**1**” of Remote Controller several times, and select “**Aging**” setting, then “**Test pattern**” will appear.
3. Push “**3**” button of Remote Controller to select the test pattern mode to forward.
4. Push “**4**” button of Remote Controller to select the test pattern mode to reverse.

<Test Pattern (Normal)>

Tuner Block (1-3)

Panel Block (4-20)

<Diagnosis>

How to diagnose by using test pattern.

Abnormal picture
(Picture Noise, Full Vertical Line, Abnormal color)

(1) In case of V10/V11 series

Test pattern (4-20)	Defective Block [Board]
Abnormal	Panel Block [D (SC/SS) Board]
Normal	Tuner Block [A Board]

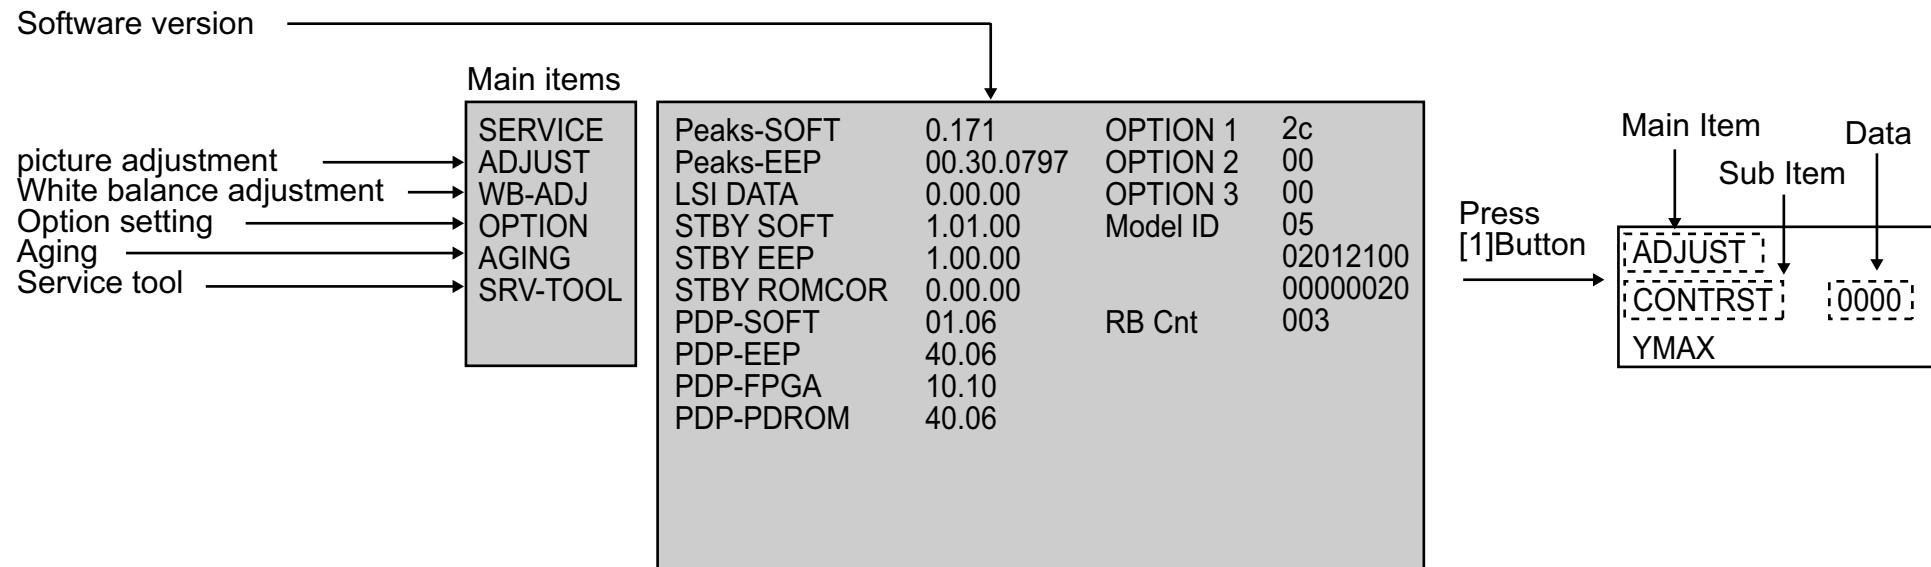

(2) In case of G10/G11/S10/X10/C10 series

Test pattern (4-20)	Defective Block [Board]
Abnormal	Panel Block [A (SC/SS) Board]
Normal	Tuner Block [A Board]

6. Service Information

<How to enter into Service Mode>

While pressing [VOLUME (-)] button of the main unit, press [RECALL] button of the remote control three times within 2 seconds.

Key command

- [1] button...Main items Selection in forward direction
- [2] button...Main items Selection in reverse direction
- [3] button...Sub items Selection in forward direction
- [4] button...Sub items Selection in reverse direction
- [VOL] button...Value of sub items change in forward direction (+), in reverse direction (-)

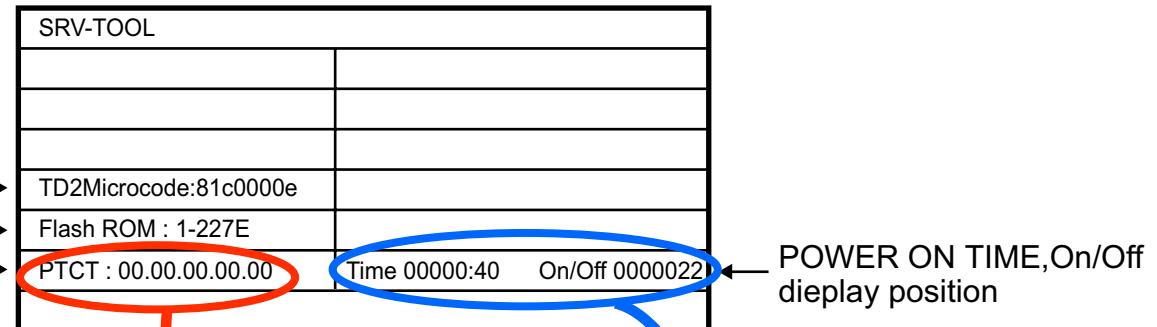

Press [OK] to memorize the value.

<Service tool mode>

How to access

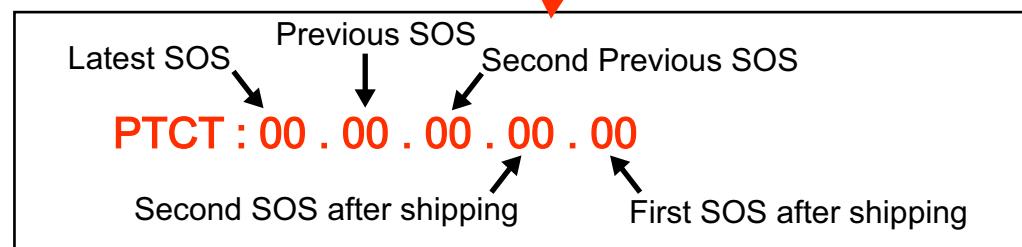

1. Select [SRV-TOOL] in Service Mode.
2. Press [OK] button on the remote control.

Display of TD2Microcode version →
 Display of Flash ROM maker code →
 Display of SOS History →

Display of SOS History

SOS History (Number of LED blinking) indication.

POWER ON TIME,On/Off

Move the cursor to right low position and press [MUTE] button for 3sec.

Note : This indication will not be cleared by either of the self-check or any command.

Exit

1. Disconnect the AC cord from wall outlet or switch off the power with the [POWER] button on the main unit.

<Contents>

As a convenient function for failure diagnosis, local maintenance function is installed to memorize log of error messages of digital broadcasting system.

By using this function analysis of troubles can be done.

<Available models>

2009 PDP models (only digital model)

<How to enter Local Maintenance display>

(1) Access SRV-TOOL display

Enter service mode, select SRV-TOOL, and push “OK” key by the remote control.

(2) Enter Log display of Local Maintenance.

By using four directions (UP, DOWN,RIGHT,LEFT), select upper-left cell of SRV-TOOL and push “OK” key for about three seconds.

The characters of Local Maintenance are indicated.

And press “OK” key again.

Log display of Local Maintenance starts.

- Escape from Local maintenance display ----- Switch off the [POWER] button.
- How to delete Log data ----- Set factory shipping conditions by self check. (refer to page 37)

<Log construction of Local Maintenance>

The explanation of log

[2009 PAL digital models]

1. cec.log - - - For the design section to analyze
2. **err_panel.log** - - - log of error message of digital broadcasting, time, kind and date reception level
(refer to page 31)
3. pow_msg.log - - - For the design section to analyze
4. record1.log - - - For the design section to analyze
5. sig_msg.log - - - For the design section to analyze

<Log construction of Local Maintenance>

How to read log data

[err_panel.log data]

300109 194903 001 0 00 03

day/month/year (30/1/2009) hour/min/sec (19/49/03)
Logical channel Local time is indicated.
0 00 03
Signal strength
Signal quality
Error No. (0: No signal/Refer to below table)

Kind of Error panel of Error No.

Error No.	Kind of Error panel	Remarks
0	NO SIGNAL	
1	NO SERVICE AVAILABLE	
2	NO VIDEO	
3	INVALID DVB CHANNEL	
4	ENCRYPTED	

<Data copy function of Local Maintenance Log to SD card>

Log of Local Maintenance can be copied by Data Copy function to SD card and log data can be confirmed by PC.

<Steps to Data copy to SD card (TV set → SD card)>

1. Making “starting file” in SD card

According to the function to use, make pwd file to start.
And keep it to SD card.

pwd file name - - - localmainte.pwd

How to make pwd file :

Create new (blank) Text file and change file name.

2. Power ON TV set and insert SD card with pwd file.

Automatically, Data Copy function display appears.

Note) Keep only one kind of pwd file in SD card.

If there are several pwd files, it may not work.

3. Input Pass word and perform Data Copy.

Input **Pass word (0813)** for Data copy to SD card and perform Data Copy.

4. Completion of Data Copy

After data copy completion is indicated, pull out SD card.

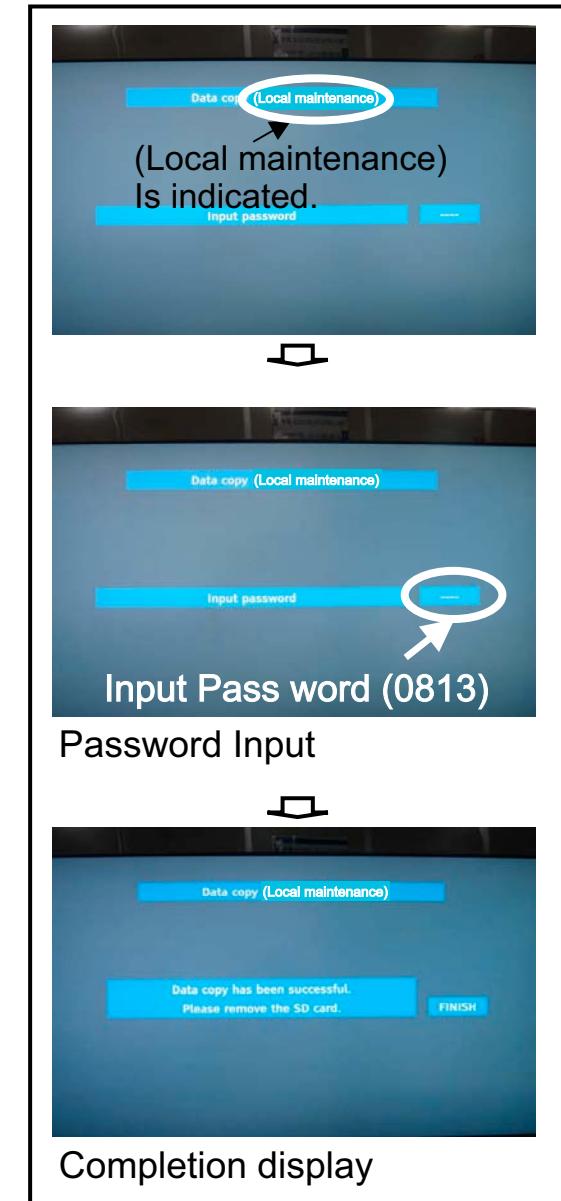

In SD card, new folder is made and in this folder, several logs are copied.

Note) No function to copy from SD card to TV set.

5. Power off the TV.

Note) By using PC, text data can be read.

And if data is not text data, change the suffix to txt or read by using the text editor.

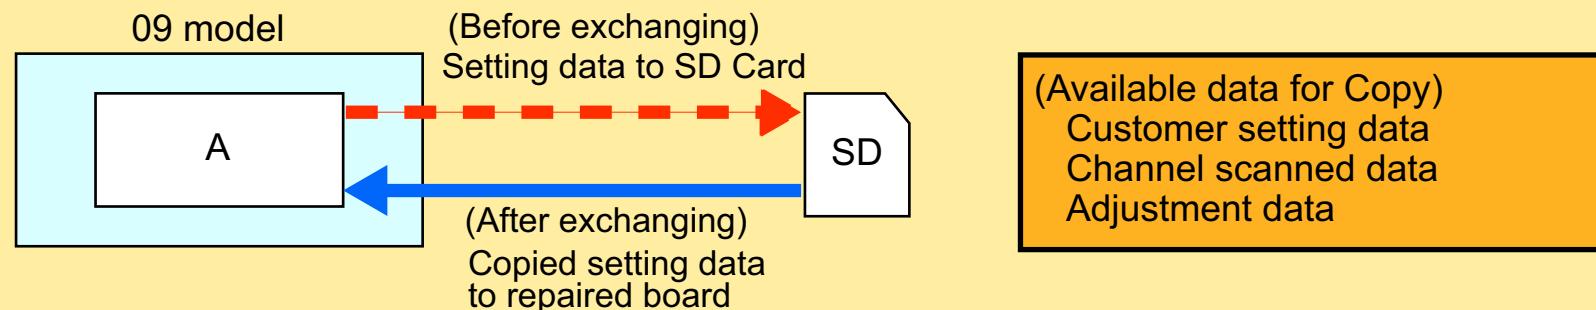

<From TV set to SD card>

There are two purposes.

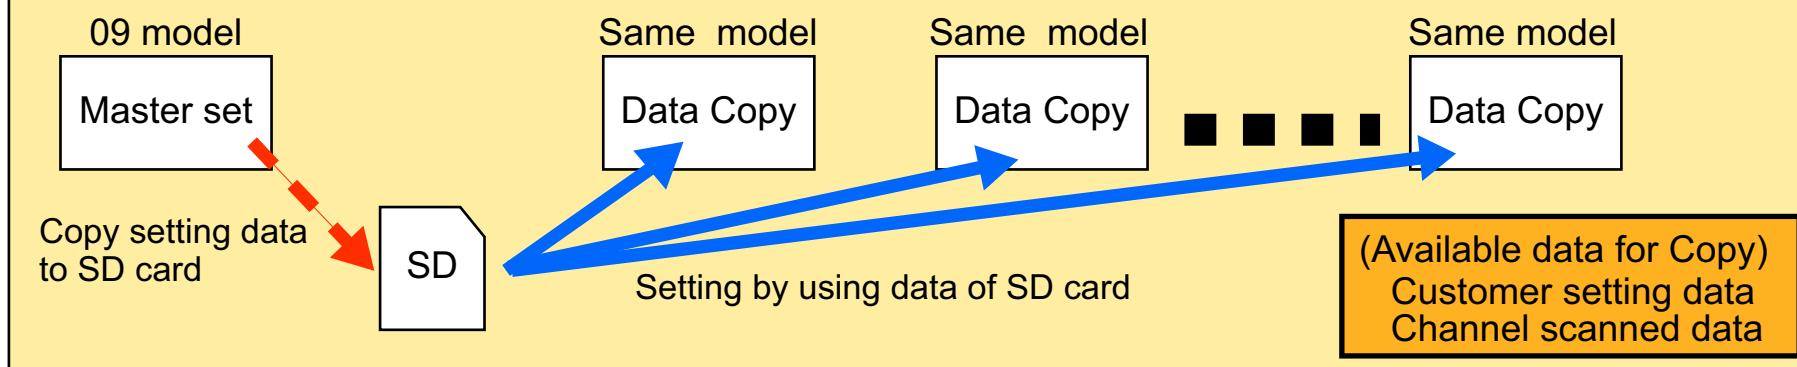

(a) Copy of setting data when exchanging repair board (A board)

When exchanging repair board customer setting data channel scanned data, and adjustment data before exchanging board data in TV is copied to SD card, and after exchanging repair board copied data in SD card can be copied to TV.

(b) Copy of hotel mode setting data

When hotel mode setting customer setting data, and channel scanned data of master set is copied to SD card, and to same models by using SD card data of master set is copied to many same models.

<From TV set to SD card>

[Preparation]

Make pwd file of (a) or (b) in SD card.

(Make new (empty) text file and change file name.)

[pwd File name]	
(a) For exchanging repair board	boardreplace.pwd
(b) For hotel mode setting	hotel.pwd

Note : Please make only 1 file ,for preventing operation error.

When making pwd file large letters should not be used.

<Steps of Data Copy to SD card (TV set → SD card)>

1. Power On TV set.
2. Insert SD card with pwd file to SD slot.
3. Automatically, Data Copy display will appear.
4. **Input Pass word** for Data copy to SD card by using remote control.

[Password for Data Copy]

- (a) For exchanging repair board - - - - **2770**
- (b) For hotel mode setting - - - - **4850**

5. Perform Data copy to SD card.

Information for reference

Time for Data copy (TV → SD card)

Euro/Asia model - - - - 90 seconds max.

6. End of Data copy to SD card

After the completion display of

Data Copy appear, pull out SD card.

Even if SD card is not pulled out, the display will appear automatically.

Power Off TV set.

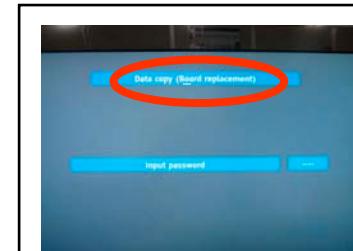

7. How to confirm Copy data

File data can be confirmed by PC.

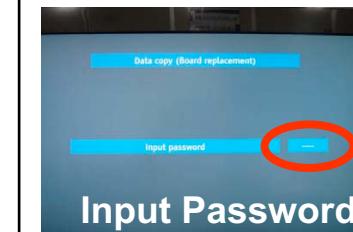

When the following folder exists, data is pulled out.

Folder Name : (a) For exchanging repair boards - - - - **user_setup**
 (After writing data, data is deleted.)

(b) For hotel mode setting - - - - **hotel**
 (After writing data, data is not deleted.)

Data copy
(Board replacement)
or
(Hotel)

Input Pass word
2770
or
4850

Performing

Completion
(e.g. exchanging repair board)

<Steps of Data Copy to TV set>

1. Power On TV set.
2. Insert SD card with Data to SD slot.
3. Automatically, Data Copy display will appear.
4. **Input Pass word** for Data copy to TV set by using remote control.

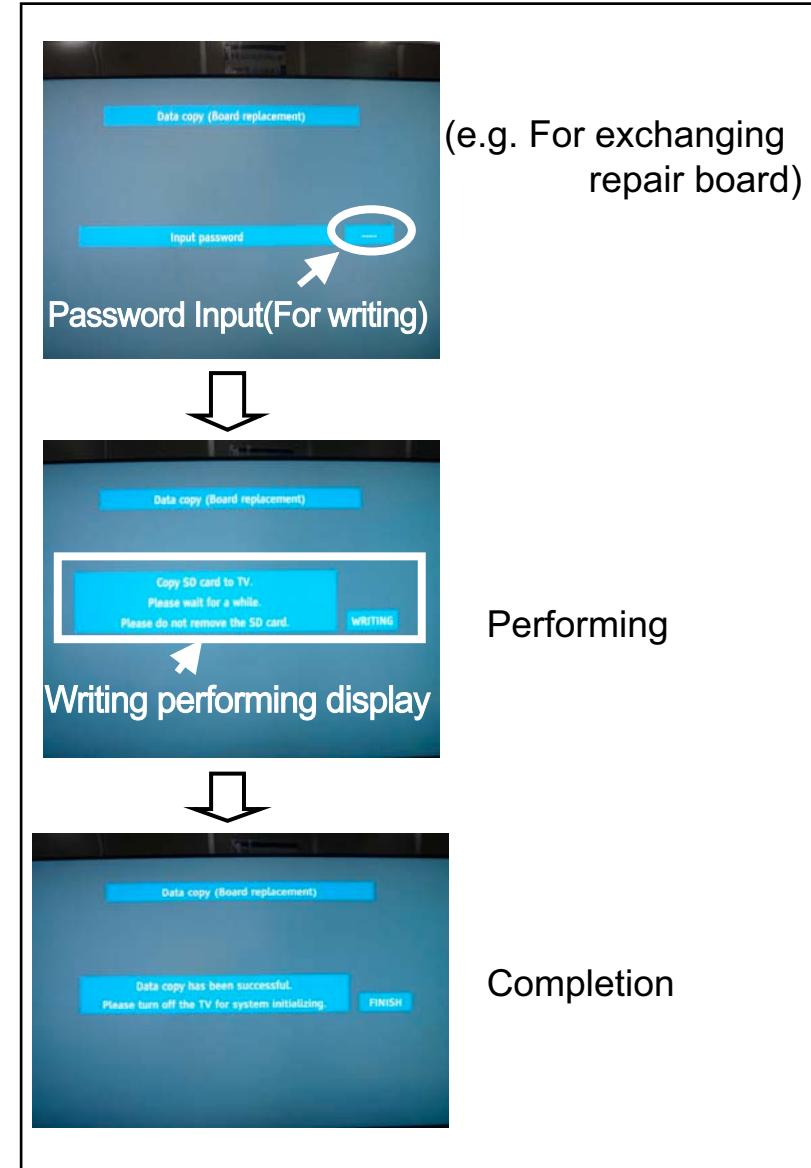

[Password for Data Copy]

(a) For exchanging repair board - - - - **2771**
 (b) For hotel mode setting - - - - **4851**

5. Perform Data copy to TV set.
6. Completion of Data to TV set.
 Completion of data Copy is displayed.
7. Pull out SD card.
 Power OFF/ON by main switch.

Note: 1. Depending on the trouble of boards, function of Data copy for exchanging repair boards does not always work.
 2. This function does not work with other model numbers.

(e.g. For exchanging repair board)

Performing

Completion

<Check of the IIC bus lines>

1. How to access

Self-check indication only :

Produce TV reception screen, and while pressing [VOLUME (-)] button on the main unit, press [OK] button on the remote control for more than 3 seconds.

Self-check indication and forced to factory shipment setting :

Produce TV reception screen, and while pressing [VOLUME (-)] button on the main unit, press [MENU] button on the remote control for more than 3 seconds.

Exit :

Disconnect the AC cord from wall outlet or switch off the power with the [POWER] button on the main unit.

2. Screen display & Check Point

(1) < V10/V11 Series > Screen display

<Contents>

By using this function, even in the case of blackout, the results of Self Check can be confirmed.

<Available models>

2009 PDP models

<Steps>

1. Power on of TV set and insert the SD card. (**Starting file is not necessary.**)
2. After inserting SD card, perform Self Check according the method of Service Manual. (refer to page 37)
3. After the completion of Self Check, log file of results is automatically made.

File name is selfcheck.log.

If selfcheck.log is already in SD card, results are overwritten.

Note: For PAL models, when self check is performed with inserting SD card and results of Self check are OK, "SELF CHECK FAILED" is displayed.

42FHD SET		Panasonic 2009PDP	
SELF CHECK FAILED

6. Service Information

(6) CSP/BGA REPAIR PARAMETER SHEET

<For PDP series in 2009>

The following parameter is fundamental data.

Therefore, it will change according to the following factors and please adjust precise value with your environment and equipment .

1. Air-conditioner 2. Personal skill 3. Specification of Tools etc.

Tools for experiment

Company : Hakko Co.,Ltd.

Model no. : Hakko852 / Hakko853

Applicable model	*PDP series in 2009 year ; The following ICs are used as common parts on several boards (PCBs) in models for all of the world. And the following parameter does not change depending on module (PCB). Therefore, please check IC size and circuit No. of replacing IC and use an appropriate parameter as below.
